

Clinic Go Where: KMeans-Based Clinic Recommendation System

Document: Individual Project Report

Submitted By: Dong Meirong

Last Updated: 02-May-2020

1. Personal Contribution

I have done below for the project:

- generated the project idea,
- collected the data,
- developed the system
- and prepare the report and video for the project.

2. Learning Points

I have learnt below through the project:

- How to use RPA tools to collect data, its pros and cons,
- How to use clustering algorithms to create recommendation systems, its advantages and limitations,
- The differences in API and RPA performances.

3. How You Can Apply the Knowledge in Other Situations

- I can use the RPA skills to make my work in office more productive
- I can use the clustering algorithms to solve other problems like recognizing the patterns of datasets
